Amended Consent Judgment Compliance Program Monthly Report

July 2012

Onondaga County Department of WATER ENVIRONMENT PROTECTION

Joanne M. Mahoney,
County Executive

ONONDAGA COUNTY DEPARTMENT OF WATER ENVIRONMENT PROTECTION

VISION

To be a respected leader in wastewater treatment, storm water management, and the protection of our environment using state-of-the-art, innovative technologies and sound scientific principles as our guide.

MISSION

To protect and improve the water environment of Onondaga County in a cost-effective manner ensuring the health and sustainability of our community and economy.

Project Progress for the Month of July

Report from Commissioner

In general, these monthly reports provide interested stakeholders with information concerning the status of Amended Consent Judgment work from the prior month. I offer a short break from that pattern to invite all to attend the Save the Rain Clean Water Fair on Saturday, September 22, 2012. The clean water fair is a great opportunity for all to visit the Metropolitan Wastewater Treatment Plant, take a bus tour of the local green infrastructure projects, and visit with local science and technology firms that are part of the Honeywell dredging project and the County's own green and gray combined sewer overflow abatement project. The event is shaping up nicely for 2012 and building on the success of previous open house events. We are sure that this will be an educational and enjoyable event for young and old alike. We hope to see you on September 22nd at the Save the Rain Clean Water Fair from 9 a.m. – 2 p.m.; a great public education opportunity.

Back to July 2012 progress with some items of note:

- The Harbor Brook Treatment Wetland pilot recently received bids, and a contract should be awarded shortly. This will be the first use of modern green technology in the treatment of combined sewer overflows permitted by New York State. The Save the Rain Program is partnering with SUNY ESF to monitor the establishment and treatment characteristics of the three different types of wetlands to be deployed.

- The two large gray Save the Rain projects currently under construction are each progressing favorably. The Lower Harbor Brook Storage Project remains on track with its demanding schedule. In addition to the standard construction progress notes on the Clinton (aka Trolley Lot) project, I also attach behind this report some additional photographs of this massive project as the construction progressed in July.

In summary, July was an extremely busy month, and the County efforts on ACJ compliance were in full swing. The consulting engineers, contractors, and department employees on the Save the Rain team are rising to the challenges of the consent judgment with good, safe work progress.

Respectfully Submitted,

Tom Rhoads P.E.,
Commissioner

GRAY PROJECTS UPDATE

Gray Projects Update

Progress of Projects Under Construction

Clinton CSO Storage Facility Project (Construction Phase)

In July the contractor continued construction activities associated with the storage facility that will collect 6 million gallons of combined sewage from 8 downtown Syracuse CSOs during wet weather events. The contractor continued the installation of the 84" conveyance, continued the excavation of the tunnel/box culvert from Station 0+00 to 6+50, completed the jet grouting from Station 6+01 to 8+15, and completed the installation of the micro-tunneling jacking pit in the West Chamber.

CSO 022/045 Sewer Separation Project (Construction Phase)

The final inspection of CSO area 045 was conducted in July, and a punch list was created. In CSO Area 022, all mainline sewer work for the project was completed with the installation of the sanitary and storm sewers in West Willow and North Franklin. Final sidewalk and pavement restoration will begin in August. The plumbing contractor, Joy Process Mechanical (JPM), continued their interior and exterior plumbing modifications completing internal and external piping for 7 properties. Once complete, the discharge of combined sewage from CSOs 022 and 045 will be eliminated and all sanitary sewage will be transmitted to Metro via the Main Interceptor Sewer (MIS).

CSO 044 Abatement Project (Construction Phase)

Construction continued on the 96" CSO conveyance pipeline that will connect CSO 044 in South Avenue to the Midland RTF. In July the contractor completed the fiber optic cable for the flushing gate controls, continued site restoration including the fencing along Onondaga Creek, conducted final inspection of structures and 96-inch diameter pipeline, and installed new sidewalks on West Castle between Midland and South avenues. In addition, the plans for the green infrastructure were completed and transmitted to the Contractor for installation.

Harbor Brook Interceptor Sewer (HBIS) Replacement and CSO Abatement Project (Construction Phase)

In July the contractor continued work on the Delaware/Grand Rain Garden and Bio-retention Area, and this segment of the project is approximately 75 percent complete. To date the project has installed 7,503 linear feet (LF) of new 18" to 36" interceptor sewer between Velasko Road and West Fayette Street on the west side of Syracuse. In addition, 5,222 LF of new local sewers were installed, ranging in size from 8" to 42" in diameter. The sewer installation is 100 percent completed, and the project overall is approximately 99 percent complete. The project is anticipated to be completed in August of 2012.

Lower Harbor Brook CSO Conveyance Project (Construction Phase)

In July the contractor continued work on the conveyance sewers from CSO 003 and 004 that will transmit combined sewage during wet weather events to the new storage tank. The excavation and installation of the pipe and manhole foundation was completed from station 4+71 to 5+56, the Harbor Brook bypass system was installed and implemented, installation of the 60-inch diameter pipe under Harbor Brook began, and the contractor started the excavation for pipe installation from station 5+56 to 6+25.

Lower Harbor Brook CSO Storage Facility Project (Construction Phase)

In July the contractor excavated for the valve vault, meter vault, and grit chamber and installed MH-A and MH-HBIS and the 24-inch gravity line between them that transmits flow from the storage tank to the HBIS for treatment at Metro. In addition, the sluice gates in the junction chamber were installed, and the 60-inch conveyance pipeline to CSO 003 was backfilled. Excavation for the 54-inch pipeline to CSO 004 began this month as well. The storage facility will store combined sewage from the three CSOs (003, 004 & 063) during storm events.

Contract amount:	$70,640,000
Bid Date:	7/14/11
Prime Contractor:	Jett Industries

FACT SHEET
Clinton CSO Storage Facility

Project Description: The Clinton CSO Storage Facility Project is a 6 million gallon combined sewer overflow storage facility that will be constructed in the parking area between the elevated rail tracks and Onondaga Creek just south of the Armory Square area of downtown Syracuse (formerly known as the Trolley Lot). During wet weather events the facility's three, parallel 18-foot diameter underground storage tunnels will capture flow from 8 combined sewer overflows (CSOs) in the vicinity of the former Trolley Lot. The wastewater will be stored in the tunnels until it can be conveyed via the main interceptor sewer to the Syracuse Metropolitan Sewage Treatment Plant (Metro) for treatment. The off-site conveyance piping, which will transmit the flow to the facility, was installed under the Clinton CSO Phase 1 and 2A conveyance projects completed in 2009. There will be additional on-site conveyance piping installed under this project to connect the existing sewers to the new facility. In addition to the tunnels, there will be two above ground structures located at either end (east and west) of the parking lot which will provide access to the tunnels and house the pumping, grit collection, and odor control facilities.

Green Components: To further enhance the sustainability of the facility, the project includes green infrastructure components. The stormwater runoff from the entire site--that measures approximately 275,000 square feet or 6.3 acres--will be managed by green infrastructure. Stormwater from the area surrounding the main structure on the western half of the site will be collected by a series of catch basins and stormwater piping that will outfall into two bioretention basins. The bioretention basins will allow the stormwater to infiltrate into the ground rather than immediately run off to the creek. In addition, stormwater runoff from the eastern half of the project site (to be restored as a parking area) will be directed to a subsurface collection facility and used to flush the storage tunnels to clear them of grit and debris that may have settled or been left behind after the stored combined sewage was transmitted to Metro. In addition, a green roof will be installed on the west building.

Construction Update: In July the contractor continued construction activities associated with the storage facility including the installation of the 84" conveyance and the excavation of the tunnel/box culvert from Station 0+00 to 6+50. The contractor completed the jet grouting from Station 6+01 to 8+15 and completed the installation of the micro-tunneling jacking pit in the West Chamber.

Project:	CSO 022/045 Sewer Separation
Project Owner:	Onondaga County
Project Location:	Syracuse
Sewershed:	Clinton/Lower MIS & Midland
Technology:	Sewer Separation
CSO Capture:	1,000,000 gal/yr
# CSOs Abated:	2
Completion Date:	12/31/12
Project Cost:	General - $4,581,888 Plumbing - $1,031,235
Bid Date:	November 29, 2011
Prime Contractor:	General – J. J. Lane Plumbing – Joy Process Mechanical

FACT SHEET
CSO Area 022 and 045 Sewer Separation Project

Project Description: In 2000, the separations of 13 separate CSO basins were designed to the 95 percent stage. The CSO areas represented basins whose full separation would be cost effective compared to other CSO abatement technologies. The remaining basins where the full separation has not been constructed were CSO areas 022 and 045. CSO area 022 is located in downtown Syracuse and the tributary sewers are located in North Franklin, West Genesee, and Willow streets. The proposed work to be performed includes 2,000 linear feet (LF) of new sanitary sewer; 800 LF of sewer lining; and twenty (20) internal building separations. CSO Area 045 is located south of downtown Syracuse with the outfall at the intersection of West Castle Street, Hudson Street, and Onondaga Creek. The combined sewage tributary to this outfall is conveyed by combined sewers located in Crescent and Hudson streets. The proposed work to be performed includes: 700 LF of new storm sewer in Hudson and Crescent streets, 1200 LF of sewer lining to convert the existing combined sewers in Crescent and Hudson streets to sanitary sewers, rehabilitation of the existing sanitary sewer in Rich Street between Hudson and Onondaga Creek, and one (1) private property separation.

Green Components: The County has successfully applied its "Greening the Gray" mission to the project through the implementation of green infrastructure as it related to the reconstruction of Pocket Park on the corner of West Genesee and North Clinton streets. The park had fallen into disrepair due to settlement issues and will be rehabilitated with green components under the CSO 022 project.

Project Update: The final inspection of CSO area 045 was conducted in July and a punch list was created. In CSO Area 022, all mainline sewer work for the project was completed with the installation of the sanitary and storm sewers in West Willow and North Franklin. Final sidewalk and pavement restoration will begin in August. The plumbing contractor, Joy Process Mechanical (JPM), continued their interior and exterior plumbing modifications completing internal and external piping for 7 properties. Once complete, the discharge of combined sewage from CSOs 022 and 045 will be eliminated, and all sanitary sewage will be transmitted to Metro via the Main Interceptor Sewer (MIS).

FACT SHEET
CSO 044 Conveyances Project

Project Description The CSO 044 Conveyances Project provides for the transmission of wet weather flow from CSO 044, which discharges to Onondaga Creek at South Avenue and West Castle Street, to the Midland Regional Treatment Facility (RTF) on the south side of Syracuse. Conveyance of the combined sewer flow to the Midland RTF will be via approximately 500 linear feet of 96-inch diameter pipeline between the terminus of the 144-inch pipeline installed under the Midland Phase Two RTF and Conveyances Project to CSO 044.

CSO 044 Conveyances Construction
January 11, 2012

Green Components: In addition to the pipeline, the project will include the construction of a new regulator structure in South Avenue and two conveyance flushing chambers. The "Greening the Gray" components incorporated include the utilization of captured stormwater for the flushing chambers, the installation of rain gardens for stormwater infiltration, and an educational interpretive walkway.

Project Update: In July the contractor completed the fiber optic cable for the flushing gate controls, continued site restoration including the fencing along Onondaga Creek, conducted final inspection of structures and 96-inch diameter pipeline, and installed new sidewalks on West Castle between Midland and South Avenues. In addition, the plans for the Green Infrastructure were completed and transmitted to the Contractor for installation.

Project:	HBIS Replacement & CSO Abatement
Project Owner:	Onondaga County
Project Location:	Harbor Brook Corridor Fayette St. to Velasko Rd.
Sewershed:	Harbor Brook
Technology:	Interceptor Replacement
CSO Capture:	36,000,000 gal/yr
CSOs Addressed:	9
Completion date:	8/31/2012
Contract amount:	$21,536,849
Bid Date:	11/2/09
Prime Contractor:	J.J. Lane Construction

FACT SHEET
Harbor Brook Interceptor Sewer (HBIS) Replacement and CSO Abatement Project

Project Description: The HBIS Replacement Project provides for a much needed upgrade to the existing Harbor Brook Interceptor between West Fayette Street and Velasko Road on the west side of Syracuse. This length of the interceptor sewer conveys dry weather flow and a portion of the combined flow from CSOs 009, 010, 011, 013, 014, 015, 016, 017, and 018 for conveyance to Metro for treatment. The existing interceptor is a U-shaped cast-in-place concrete pipe constructed in the 1920s and has fallen into disrepair. Due to the shape and age of the HBIS, flow restrictions have developed which have decreased capacity and increased infiltration in some areas. The project includes the installation of 7,600 linear feet (LF) of new HBIS ranging in size from 18- to 36-inches in diameter, 1,500 LF of new local sewers, rehabilitation of 860 LF of 30-inch brick sewer, installation of 4 new regulator manholes, and rehabilitation or replacement of 2500 LF of Harbor Brook Culvert. In addition, during construction the available funding allowed CSO areas 013 and 016 to be completely separated which will increase CSO capture and eliminate two CSO discharge points. As a result, the capture projection for this project is anticipated to be 0.9 percent or 36 million gallons.

Green Components: The County has successfully applied its "Greening the Gray" mission to the HBIS Replacement Project. The GI components incorporated into this gray construction project include the installation of approximately 40 enhanced tree basins with infiltration zones and the construction of a bioretention area that will manage stormwater runoff from an area of approximately 3.2 acres. The enhanced tree basins will be located on Hartson, Herriman, and Hoeffler streets in the Skunk City area of Syracuse. The bioretention area will be located at the corner of Grand Avenue and Delaware Street and will contain a series of rain gardens and bioretention swales which will collect off-site runoff from impervious areas and manage the on-site stormwater as well. The site will have a "park-like" setting with an educational theme.

Construction Update: In July the contractor continued work on the Delaware/Grand Rain Garden and Bio-retention Area and this segment of the project is approximately 75 percent complete. To date the project has installed 7,503 LF of new 18" to 36" interceptor sewer between Velasko Road and West Fayette Street on the west side of Syracuse. In addition, 5,222 LF of new local sewers were installed, ranging in size from 8" to 42" in diameter. The sewer installation is 100 percent complete and the project overall is approximately 99 percent complete. The project is anticipated to be fully complete in August of 2012.

FACT SHEET
Lower Harbor Brook CSO Storage and Conveyances Project

Project:	LHB CSO Conveyances & Storage
Project Owner:	Onondaga County
Project Location:	State Fair Blvd., Syracuse
Sewershed:	Harbor Brook
Technology:	Underground Tank
Capacity:	4,900,000 gallons
CSO Capture:	55,000,000 gal/yr
# CSOs Abated:	3
Completion Date:	12/31/13
Contract Amount:	Conveyances – $4,147,888 Storage – $25,039,101
Bid Date:	Conveyances – 8/30/11 Storage – 10/18/11
Prime Contractor:	Conveyances – J.J. Lane Storage – C.O. Falter

Project Description: The Lower Harbor Brook CSO Conveyances and Storage Facility Project is a 4.9 million gallon combined sewer overflow storage facility that will be located on County owned property on State Fair Boulevard between Hiawatha Blvd. and West Genesee Street in the City of Syracuse. The facility will capture and store the overflows from CSOs 003, 004 and 063 for up to the 1-year, 2-hour design storm event. After the storm event subsides, the contents of the storage tank will be pumped to the existing Harbor Brook Interceptor Sewer for conveyance to the Metropolitan Treatment Plant (Metro) for full treatment. The project also includes construction of CSO conveyance pipelines on State Fair Blvd., Hiawatha Blvd., and Erie Blvd. to convey combined sewage from the overflow regulators to the storage tanks during rainfall and snowmelt events. Floatables and grit removal will be included in this facility. Odor control provisions will be incorporated into the facility design and the tank will be completely enclosed.

Green Components: To further enhance the sustainability of the facility, the project includes green infrastructure components. The stormwater runoff from the rooftops of the storage tank and controls building will be stored within the CSO storage tank and used for a second and third cleaning flush of the tank. This water will ultimately be treated at Metro eliminating the need for this stormwater to be treated on-site. The stormwater storage is designed to capture the 100-year storm (5.2 inches) from the tank and the control building rooftop.

Project Update: *Conveyances* - In July, the contractor continued work on the conveyance sewers from CSO 003and 004 that will transmit combined sewage during wet weather events to the new storage tank. The excavation and installation of the pipe and manhole foundation was completed from station 4+71 to 5+56, the Harbor Brook bypass system was installed and implemented, installation of the 60-inch diameter pipe under Harbor Brook began and the contractor as started the excavation for pipe installation from station 5+56 to 6+25.

Storage - In July, the contractor excavated for the valve vault, meter vault and grit chamber; and installed MH-A and MH-HBIS and the 24-inch gravity line between them that transmits flow from the storage tank to the HBIS for treatment at Metro. In addition the sluice gates in the junction chamber were installed and the 60-inch conveyance pipeline to CSO 003 was backfilled. Excavation for the 54-inch pipeline to CSO 004 began this month as well.

GREEN PROJECTS UPDATE

Green Projects Update

July has been an active month for Save the Rain green infrastructure projects. Several projects have been completed with additional projects under construction.

Progress continues on the City/County public library projects. Renovations at Petit Library are complete. Construction is near completion at Hazard Library while work continues at the White, Beauchamp, and Mundy branches. The entire library schedule is on track for completion in September 2012.

Renovations at the Sunnycrest Park Golf Course have been completed with the construction of a green parking lot at the park. The project included pavement removal and stormwater capture into two separate bio-retention systems.

This month also featured completion of another green street. The Sumner Avenue project included construction of underground infiltration systems to capture stormwater from the roadway. This project is similar to the green street project completed in 2011 at Concord Place.

The first project in the vacant lot program (701 Oswego Street), has been completed with the construction of two infiltration trenches and an urban garden. The project included apple and peach trees and berry bushes. Additional vacant lots have been identified for renovations, and work will soon begin on the next project located at 1344 West Onondaga Street.

The Wilbur Avenue Zoo Entrance project is now complete. The project included three separate rain garden systems in the park and was the second phase of renovations in conjunction with the Avery Avenue Pass Arboretum project.

FACT SHEET
Connective Corridor Phase 1, Contract 1

Project:	Connective Corridor P1, C1
Project Owner:	City of Syracuse
Project Location:	University Avenue
Sewer shed:	Clinton/Lower MIS
GI Technology:	Green Street
Capture Area:	326,000 sq. ft.
Run-off Reduction:	5,200,000 gal/yr
Year Contracted:	2011
Year Completed:	2012
Construction Cost:	$948,717
Prime Contractor:	Barrett Paving Materials, Inc.

Project Description: The Connective Corridor project is a major infrastructure plan that creates a strong visual and physical link along the major streetscape connections between Syracuse University and the downtown business districts. The project built upon needed public works improvements. Green infrastructure such as tree trenches and porous pavement were incorporated into traffic-calming streetscape designs that feature bicycle lanes and landscape buffers between vehicular and pedestrian zones. The project required close collaboration and cooperation among the City, Syracuse University, and the County.

This first phase of the Connective Corridor project involved the design and construction of a "green street" on the section of University Avenue between East Genesee and Waverly Streets, in the heart of the Syracuse University area. The project is one of the most significant collaborations between the City, County and Syracuse University and will addresses a considerable amount of storm water runoff. In addition to large-scale capture, the project provides a showcase for the implementation of green infrastructure in urban settings in a highly-travelled corridor of the City.

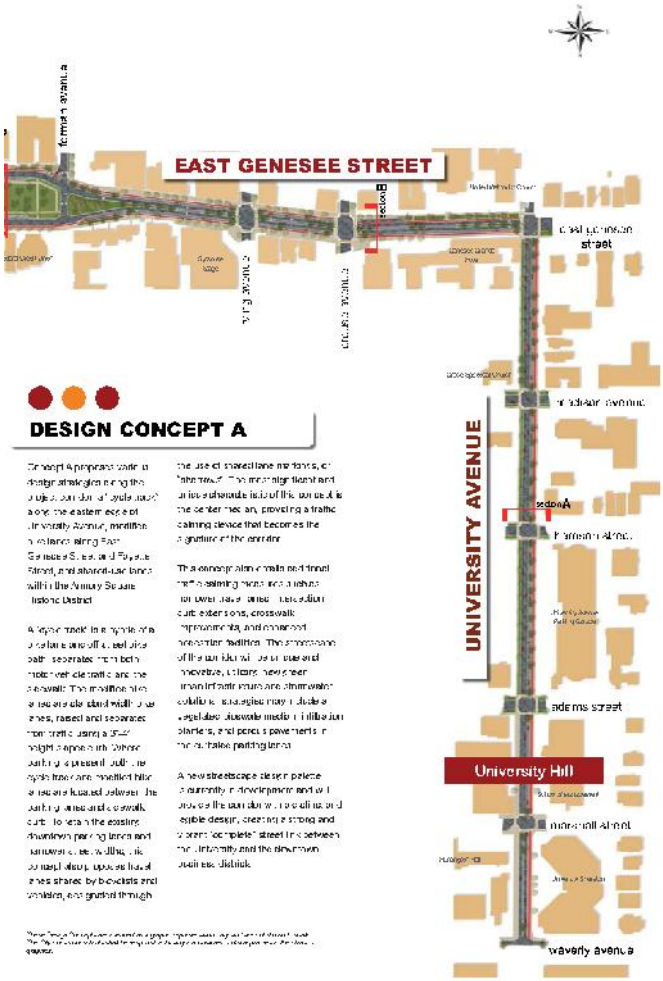
Save the Rain

DESIGN CONCEPT A



DESIGN CONCEPT A

Concept A proposes wide-ranging design strategies along the public portion of Doyle Street along the eastern edge of University Avenue, and the Genesee Street and Doyle Street, and shared-use lanes within the Armory Square historic district.

A signature feature of this concept is a median along Doyle Street with separated multi-modal traffic and the sidewalk. This modification also includes a dedicated bike lane, raised and separated from traffic using a curb height separation. Where parking is present, bike lanes are shifted into the travel lanes between the parking lanes and sidewalk curb. To retain the existing shoulders parking lanes and narrower curb-to-curb width, this concept proposes shared lanes shared by bicyclists and motorists, distributed through the use of sharrow lane markings, or "share arrows". The most significant and unique streetscape feature of this concept is the center median, providing a traffic calming device that becomes the signature of the corridor.

The concept also emphasizes additional traffic calming measures including curb extensions, crosswalk improvements, and commercial intersection treatments. The implementation of these features will require the use of innovative, context sensitive design solutions. Innovative stormwater solutions strategies may include vegetated bioswale median infiltration planters, and porous pavements in the curbside parking lanes.

A new streetscape design palette is currently in development and will provide the foundation for the selection of sensitive design, creating a strong and vibrant "complete" street link between the University and the downtown Armory District.

Leavenworth/Barker Parks

Project:	Leavenworth/Barker Parks
Project Owner:	City of Syracuse Parks Dept.
Project Location:	301 Park Ave and Matty Ave
Sewershed:	Clinton
GI Technology:	Bioswale, Bioretention, Porous Pavement
Capture Area:	24,000 sq. ft.
Run-off Reduction:	1,574,000 gal/yr
Year Contracted:	2012
Construction Cost:	$574,500
Bid Date:	6/27/12
Prime Contractor:	John R. Dudley Construction

Project Description: The Leavenworth/Barker Parks Project involves capturing stormwater runoff from numerous adjacent streets and allowing it to infiltrate through several different green infrastructure features. Stormwater will be captured from Matty Avenue, Park Avenue, Barker Avenue, Wilkinson Street, and Tracy Street as part of this project. Around the perimeter of Leavenworth Park, vegetated swales atop stone infiltration beds capture roadway runoff and allow it to infiltrate directly into the groundwater below. These swales will be planted with two groundcover species and a native wetland grass species that can tolerate both wet and dry soils.

At the adjacent Barker Park, a rain garden was installed between Tracy and Wilkinson streets. The rain garden included plantings with a mixture of native shrubs, flowering perennials, and grass species that will foster evapotranspiration and infiltration, preventing runoff from entering the combined sewer system.

The final feature of Barker Park is a new basketball court that will be made of porous asphalt, allowing stormwater to infiltrate directly through the asphalt surface and thus making the court playable even after a rain storm. This basketball court will be done in conjunction with Courts4Kids, an initiative of the Jim and Juli Boeheim Foundation and the Carmelo K. Anthony Foundation.

The green infrastructure at Leavenworth Barker Park is designed to capture up to 1" of rainfall at a given time, reducing annual stormwater runoff by approximately 1,574,000 gallons.

Onondaga County Public Libraries: Petit Library

Project:	Petit Library
Project Owner:	OCPL
Project Location:	105 Victoria Place
Sewershed:	Clinton/Lower MIS
GI Technology:	Porous Concrete, Roof Leader Disconnection
Capture Area:	14,000 sq. ft.
Run-off Reduction:	254,000 gal/yr
Year Completed:	2012
Construction Cost:	$129,147
Prime Contractor:	Davis Wallbridge

Project Description:

The Petit Library project is part of the Onondaga County Public Libraries (OCPL) "Green Library Initiative," a partnership between the Save the Rain program and OCPL to capture stormwater while providing aesthetic benefits to the libraries.

The Petit Library project consists of two porous concrete areas within the existing parking lots. Beneath the porous concrete areas are large stone infiltration basins designed to capture runoff from the parking lots and roof of the Libary. The two infiltration basins are also connected to the combined sewer along Victoria Place, so that in the event of a large storm event, stormwater that exceeds the capacity of the infiltration basin systems will be allowed to overflow into the combined system.

Salina Street Post Office Green Roof

Project:	Salina Street Post Office Roof
Project Owner:	US Postal Service
Project Location:	2200 South Salina Street
Sewer shed:	Midland
GI Technology:	Green Roof
Capture Area:	13,000 sq. ft.
Run-off Reduction:	229,000 gal/yr
Year Contracted:	2012
Construction Cost:	$260,000 *(Engineer's Estimate)*
Bid Date:	08/21/12
Prime Contractor:	TBD

Project Description: The Green Roof at the Salina Street Post Office highlights the growing partnership of the Save the Rain program with other municipal and federal entities in Onondaga County. This project is the first Save the Rain project on USPS property to date.

The stormwater retrofit project will install a green roof system on the entirety of the Post Office roof. The green roof features plantings in a lightweight growing medium on top of a waterproof membrane designed to capture stormwater, irrigate the plantings, and allow excess storm water to evapotranspirate. The existing roof system will be removed prior to the installation of the new membrane and plantings of the sedum turf. In total, this project captures approximately 229,000 gallons of stormwater annually.

FACT SHEET
Syracuse City School District Central Offices Parking Lot

Project:	SCSD Central Offices Parking Lot
Project Owner:	SCSD
Project Location:	725 Harrison St.
Sewershed:	Clinton
GI Technology:	Porous pavement, Infiltration Beds
Capture Area:	125,000 sq. ft.
Run-off Reduction:	2,036,000 gal/yr
Year Contracted:	2011
Year Completed:	2012
Construction Cost:	$422,796
Prime Contractor:	Orchard Earth and Pipe

Project Description: This project involved the construction of two infiltration trenches under standard asphalt and two infiltration beds beneath porous asphalt in the parking lot of the Syracuse City School District (SCSD) Central Offices on Harrison Street. These green infrastructure installations are expected to capture over two million gallons of stormwater per year.

A unique facet of this particular project was that designing the infiltration bed along Harrison Street to be 12 feet deep allowed the interception of a 24" storm line. This storm line originates from the adjacent Hutchings Psychiatric Center and allows for the capture of runoff from both the Central Offices Parking Lot and from the roof of all of the Hutchings' buildings and Hutchings' parking lot – making this one of the most cost efficient Save the Rain projects thus far.

FACT SHEET
Syracuse City School District
Dr. Weeks Elementary School

Project:	Dr. Weeks Elementary School
Project Owner:	Syracuse City School District
Project Location:	710 Hawley Ave
Sewershed:	Erie
GI Technology:	Bioretention
Capture Area:	124,000 sq. ft.
Run-off Reduction:	2,177,000 gal/yr
Year Contracted:	2011
Year Completed:	2012
Construction Cost:	$89,000
Prime Contractor:	Fahs Construction

Project Description: The Dr. Weeks Elementary School Project is a green infrastructure project completed in conjunction with the Joint School Construction Board (JSCB) project at the school. The JSCB was planning a wider retrofit of the school building and property, and the Save the Rain program partnered with them to make the renovations green.

The project consisted of two bioretention areas that are designed to capture runoff from nearly all of the impervious area surrounding the site. This includes all of the paved areas in and around the playground and the parking lot adjacent to the school. In total, this project prevents 2,177,000 gallons of stormwater from entering into the combined sewer system annually.

Vacant Lot Project: 109 Hartson Street

Project:	Vacant Lot at 109 Hartson Street
Project Owner:	City of Syracuse
Project Location:	109 Hartson Street
Sewershed:	Harbor Brook
GI Technology:	Bioretention, Urban Forestry
Capture Area:	2,000 sq. ft.
Run-off Reduction:	93,000 gal/yr
Year Contracted:	2012
Construction Cost:	$36,831.29
Bid Date:	7/12/12
Prime Contractor:	Cornerstone Paving

Project Description:
The Vacant Lot Project at 109 Hartson Street involves the installation of an urban forest and rain garden, which will both beautify the lot and provide increased ecological benefits but will also capture stormwater runoff from adjacent Hartson Street. After capturing the runoff, the rain garden will allow the runoff to infiltrate into the ground as it would in a natural environment instead of entering into the sewer system, which stormwater often does in paved, urban environments.

The trees that will be planted at this site include Eastern Redbud, Black Gum, and Wafer Ash. The rain garden features a mix of native shrubs, flowering perennials, and ornamental grasses designed to attract butterflies and provide a mix of color and seasonal interest.

The green infrastructure at 109 Hartson Street is designed to capture up to 1" of rainfall at a given time, reducing annual stormwater runoff by approximately 93,000 gallons.

Vacant Lot at 701 Oswego St.

Project:	Vacant Lot 701 Oswego St.
Project Owner:	City of Syracuse
Project Location:	701 Oswego St.
Sewershed:	Clinton
GI Technology:	Infiltration Trenches, Urban Garden
Capture Area:	15,000 sq. ft.
Run-off Reduction:	259,000 gal/yr
Year Contracted:	2011
Year Completed:	2012
Construction Cost:	$99,714
Prime Contractor:	Cornerstone Paving

Project Description: The Vacant Lot at 701 Oswego Street project was the first STR Vacant Lot project completed. The Vacant Lot Initiative involves a vision for converting City and County-owned empty lots into useable spaces for public benefit. This conversion can be done while capturing stormwater at the same time.

This project included the installation of two infiltration trenches designed to capture stormwater from Oswego and Shonnard Streets via existing stormwater infrastructure. The existing catch basins along both streets will be used to convey stormwater into the infiltration trenches. Another facet of this project was an urban garden which will consist of peach and apple trees as well as berry bushes.

This green infrastructure project is designed to capture up to 1" of rainfall at a given time, reducing annual stormwater runoff by approximately 259,000 gallons annually.

FACT SHEET
Vacant Lot Project: 224-226 Putnam Street

Project Description:

The Vacant Lot Project at 224-226 Putnam Street includes the installation of seven new trees and a rain garden, which will capture stormwater runoff from Putnam Street and improve the aesthetics and ecological function of the vacant lot. After capturing the runoff, the rain garden will use the process of bioretention allowing the runoff to infiltrate as it would in a natural environment instead of entering into the sewer system, which stormwater often does in paved, urban environments.

A variety of trees will be planted at this site, including White Peach and Allegheny Serviceberry trees. The rain garden features a mix of native shrubs, colorful flowering perennials, and ornamental grasses.

This green infrastructure is designed to capture up to 1" of rainfall at a given time, reducing annual stormwater runoff by approximately 120,000 gallons.

FACT SHEET
Vacant Lot Project at 1344-50 W Onondaga St.

Project Description: The Vacant Lot Project at 1344-50 West Onondaga Street involves the installation of an urban forest and rain garden. These features serve to beautify the lot while also capturing stormwater runoff from West Onondaga Street. The project captures approximately 4,000sf of runoff from the impervious roadway and an additional 4,000sf from the vacant lot itself.

After capturing the runoff, the rain garden allows it to infiltrate as it would in a natural environment. A variety of shrubs and flowering perennials will be planted in the rain garden, along with seven new trees planted on the lot including attractive, flowering species such as Eastern Redbud and Flowering Dogwood. As this site is naturally hilly, the new tree plantings and grass groundcover will also serve to prevent erosion and loss of topsoil from the site.

This green infrastructure project is designed to capture up to 1" of rainfall at a given time, reducing annual stormwater runoff by approximately 120,000 gallons.

GREEN IMPROVEMENT FUND

Green Improvement Fund Update

During the month of July the Green Improvement Fund (GIF) received two new applications, bringing the total number of applications submitted to 95.

This month, GIF projects were completed at ARC of Onondaga, located at 401 Lowell Ave., and Brooklyn Pickle, located at 166 West Genesee Street. Overviews of these projects can be found on the GIF project fact sheets included in this report.

Several other GIF projects are currently under construction, and several more are moving toward final design.

Additional opportunities for potential partnerships are currently being developed, and the program continues to review current practices to ensure program efficiency.

Sewershed:	Harbor Brook
GI Technology:	Porous Pavement
Capture Area:	8,000 sq. ft.
Run-off Reduction:	299,400 gal/yr
Year Completed:	2012
GIF Award:	$93,504

Project Description: Arc of Onondaga, a chapter of NYSARC, Inc., is the largest provider of services to people with developmental disabilities in Onondaga County. Arc offers these services at several different facilities located throughout the city.

Recently, Save the Rain partnered with Arc of Onondaga to redevelop a parking lot at their Monarch Vocational Center located at 401 Lowell Ave. The Center provides employment opportunities and training for people with developmental disabilities.

The project featured the construction of an 8,000 square foot porous asphalt parking lot. Additionally, roof liters from the building have been connected to the parking lot to capture run-off from the roof. The project will capture approximately 300,000 gallons of storm water annually.

Brooklyn Pickle

Project:	Brooklyn Pickle
Project Owner:	Private
Project Location:	166 W. Genesee Street
Sewershed:	Harbor Brook
GI Technology:	Rain Garden, Enhanced Landscaping
Capture Area:	5,567 sq. ft.
Run-off Reduction:	104,500 gal/yr
Year Completed:	2012
GIF Award:	$30,675

Project Description: Since 1975 Brooklyn Pickle has been a staple of the Syracuse community offering homemade- style sandwiches and soups. With two locations in the City, Brooklyn Pickle has become a Syracuse favorite for good food made to order.

Recently the shop, located at 1600 West Genesee Street underwent a substantial renovation that included green infrastructure elements funded through the Green Improvement Fund.

The project features enhanced landscaping around the perimeter of the redeveloped facility. The project also features a porous concrete strip on the east-side of the facility that allows runoff to enter the enhanced landscaping features. The landscaping is supported by the construction of a rain garden to capture stormwater runoff from the roof of the facility.

METRO WWTP PHOSPHORUS PROJECTS/TMDL/AMBIENT MONITORING PROGRAM UPDATE

Metro WWTP Phosphorus Projects/TMDL/Ambient Monitoring Program Update:

Metro Phosphorus Optimization Project

Phosphorus optimization testing began: conducted bioavailability and PAC testing efforts.

Metro Phosphorus Work Plan Project

Work progressed on final report compliance plan in response to finalized Onondaga Lake Phosphorus TMDL.

Onondaga Lake Water Quality Model

A graphical user interface to guide additional model applications was developed by Anchor QEA, and a training session was conducted for OLP members on August 2, 2012. DVDs were distributed to participants and will be mailed to t hose calling in for the Webex.

Ambient Monitoring Program

WATER QUALITY MONITORING PROGRAM

Tributary Sampling (July 2012)

- Tributary Bacteria sampling events conducted on July 11, 20, and 25.
- Tributary Biweekly sampling event conducted on July 5, 17, and 31.

Tributary Bacteria Compliance Assessment (June 2012)*:

- Bacteria in Compliance with the NYS Ambient Water Quality Standards (AWQS) for: Unknown

  Note: *Compliance could not be assessed at the following sampling sites as 5 samples per month were not collected due to personnel performing Tributary Coliform ID-Phase 2 Study tasks: Bloody Brook at Onondaga Lake Park, Harbor Brook at Bellevue Avenue, Onondaga Creek at Plum Street, Onondaga Creek at Kirkpatrick Street, Trib5A @ State Fair Blvd., Nine Mile Creek at I-695, and Allied East Flume at Manhole 015.

  Note: *Compliance could not be assessed at the following sites as 5 samples per month were not collected at Tributary 5A at State Fair Blvd., Sawmill Creek at Onondaga Lake Recreational Trail, and Harbor Brook at Hiawatha Blvd. due to construction/road closure.

- Bacteria in Non-Compliance for:
  Onondaga Creek at Dorwin Avenue, Ley Creek at Park Street, and Harbor Brook at Velasko Road.

Onondaga Lake Sampling (July 2012)

- Lake weekly sampling events conducted on July 6, 16, 30.
- Lake south deep biweekly sampling events conducted on July 10 and 24.

BIOLOGICAL MONITORING PROGRAM

Sampling Summary (July 2012)

- Littoral Larval Seines – The second and final event of the year was completed on July 10, 2012.
- Larval Trawls – The second and final event of the year was completed on July 13, 2012.
- Juvenile Fish Seines – The first of five sampling events was completed on July 19, 2012.
- Juvenile Boat Electrofishing – This is an annual event completed on August 6, 20122, 2012.
- Honeywell/MOST Back Pack Electrofishing Demonstration – On July 12, 2012, WEP staff conducted an electrofishing demonstration on Ninemile Creek for approximately 60 middle school students taking part in Honeywell Summer Science Week, which provides learning opportunities to help inspire a new generation of scientists in Central New York.

Highlights of the July 2012 Biological Sampling Events

Honeywell/MOST Back Pack Electrofishing Demonstration

- In response to the request by Chris Plumley (Coordinator for the MOST/Honeywell Summer Science Week) staff from WEP performed an electrofishing demonstration on Ninemile Creek July 12, 2012. In addition to the backpack electrofishing demonstration other sampling gear used by Onondaga County as part of the AMP biological sampling program was on display and explained how and why its is used. Students were also able to handle and identify fish collected during the electrofishing demonstration. Fish species collected included brown trout, longnose dace, cutlips minnow, bluegill, pumpkinseed, goldfish, and bluntnose minnow.

Students learning how a backpack electrofishing unit works.

ELS technicians demonstrating the use of a backpack electrofisher.

Students examine two brown trout collected during the backpack electrofishing demonstration.

LEGISLATIVE/REGULATORY/ MEDIA UPDATE

Legislative/Regulatory Update

Action Items for the County Legislature in the Month of July

- Authorizing acceptance of grant funds from the United States Environmental Protection Agency and authorizing the execution of grant agreements to implement the intent of this resolution ($388,000).

- Authorizing acceptance of additional grant funds from the New York State Environmental Facilities Corporation Green Innovative Grants Program and authorizing the execution of grant agreement to implement the intent of this resolution ($37,500).

Action Items for the Environmental Protection Committee in the Month of August:

- ACJ Update

- Approving the 2011 Industrial Wastewater Surcharge ($1,443,238.15).

- A resolution authorizing the acceptance of the Westfield Trunk Sewer from the Village of Manlius for and on behalf of the Onondaga County Sanitary District, and authorizing the County Executive to enter into any and all agreements necessary to execute the transfer.

- A resolution authorizing acceptance of grant funds from New York State Environmental Facilities Corporation Green Innovative Grants Program and authorizing execution of grant agreements to implement the intent of this resolution.

Green Infrastructure in Onondaga County

2012 July 16

By Nancy Stoner

Last month, I traveled to Syracuse, New York. Syracuse is located in Onondaga County, which is one of EPA's "model communities" for green infrastructure because of the county's "Save the Rain" campaign, which is a unique partnership between the City of Syracuse, Onondaga County and others to build nearly 100 green infrastructure projects over three years. The goal of these projects is to prevent polluted water from entering Onondaga Lake, which historically suffered from high levels of industrial and stormwater toxins.

With assistance from EPA, NY Department of Environmental Conservation, Environmental Finance Center at Syracuse University, Syracuse Center of Excellence and its partners, and many others, green infrastructure is being used to slow the flow of stormwater, allowing it to make its way back into the ground where it can be filtered as part of the water cycle.

During my visit to Syracuse, I was in awe of efforts to quickly introduce widespread green infrastructure. What makes Syracuse and Onondaga County unique is the sheer number of projects that they are simultaneously undertaking. I saw construction everywhere as workers were laying greener sidewalks, planting trees and repaving roads with porous asphalt.

Onondaga County is also taking green infrastructure to the top of local buildings. The roof of the War Memorial Arena now houses rain-capturing cisterns that supply the water for the arena's minor league hockey rink. I learned that treated rain freezes harder than tap water, so the hockey team prefers to skate on the more durable, rainwater-harvested ice. Also, the roof of the County's convention center is now green. The building's 66,000 square-foot roof is covered in plants – making it one of the largest green roofs in the northeast. These two projects alone will prevent over one million gallons of polluted water from entering Onondaga Lake each year.

Efforts to improve water quality go well beyond the city's infrastructure and infiltrate the community. To complete many of their green infrastructure projects, officials support neighborhood businesses by hiring local contractors and manufacturers. Projects also span into the suburbs where households can receive free rain barrels and water-harvesting training. Officials are also working to connect students with their surroundings. Through the Onondaga Earth Corps, students participate in environmental service projects that teach them about their relationship with the environment. This program prepares local youth to become the next generation of innovative thinkers who develop the latest technologies and trends in green infrastructure.

About the author: Nancy Stoner is the Acting Assistant Administrator for the EPA's Office of Water

Water: Water Headlines

July 24, 2012

1) EPA Provides $950,000 to Help 17 Communities Use Green Infrastructure to Improve Water Quality
2) Blog Spotlight: Wade In and Cast Your Vote for the 2012 Winners of the Rachel Carson Sense of Water Contest
3) Blog Spotlight: Green Infrastructure in New York's Onondaga County
4) Success Spotlight: Muddy Creek, Virginia

1) EPA Provides $950,000 to Help 17 Communities Use Green Infrastructure to Improve Water Quality
EPA is providing $950,000 to help 17 communities expand the use of green infrastructure to improve water quality and benefit communities. The EPA funding is intended to increase incorporation of green infrastructure into stormwater management programs and will support work such as review of local development and stormwater policies, cost benefit assessments, and the development of design guidance. EPA is awarding the technical assistance across 16 states to communities ranging in type, size, and climate zone. Some communities-like Beaufort, South Carolina and Neosho, Missouri-are small towns in urban growth areas interested in preserving their high quality waters. Others, such as Camden, New Jersey and Pittsburgh, Pennsylvania, are large cities interested in adding green infrastructure into their redevelopment projects to restore degraded urban waters and help revitalize their communities. Click here for more information.

2) Blog Spotlight: Wade In and Cast Your Vote for the 2012 Winners of the Rachel Carson Sense of Water Contest
Kathy Sykes, a senior advisor at EPA's Office of Research and Development, blogged about her experience with the Rachel Carson Sense of Water Contest this year in recognition of the 40th Anniversary of the Clean Water Act. In the blog, Ms. Sykes calls for members of the public to cast ballots to help select winners of the contest. Click here to read the blog.

3) Blog Spotlight: Green Infrastructure in New York's Onondaga County
Nancy Stoner, acting Assistant Administrator for EPA's Office of Water, blogged about one of EPA's "model communities" in Onondaga County, NY for green infrastructure which she recently visited. In the blog, Ms Stoner cites examples, such as green rooftops and rainwater harvesting, that help to slow down pollution to Onondaga Lake. Click here to read the blog.

4) Success Spotlight: Muddy Creek, Virginia
EPA's Clean Water Act Section 319 Program provides funding for restoration of nonpoint source-impaired water bodies. This week's success spotlight shines on Muddy Creek, Virginia, which is in an agricultural watershed in Rockingham County, approximately 15 miles northwest of Harrisonburg, Virginia. Nutrients from agriculture and failing septic systems increased levels of nitrate-nitrogen in Virginia's Muddy Creek, exceeding the state's water quality standard. As a result, the Virginia Department of Environmental Quality added an approximately two-mile segment of the creek to the state's list of impaired waters in 1998. Project partners worked with landowners to implement numerous residential and agricultural best management practices, including installing livestock exclusion fencing, planting buffers, as well as some soil conservation practices, which over time brought nitrogen levels in the creek into compliance with the water quality standards. As a result, the state removed this segment of Muddy Creek from its list of impaired waters for nitrate-nitrogen in 2010. Click here for more information on this story.

Save the Rain team speaks to “Project Engage” at Water Street Gateway

WRITTEN BY STAFF THURSDAY, 26 JULY 2012 00:00

Eighth grade girls from the northeast attending the Syracuse University Project Engage camp, a STEM summer camp for girls, got a real life view of green infrastructure when they visited the Water Street Gateway in downtown Syracuse, last Wednesday.

The visit was part of their weeklong program focused on Sustainability and Alternate Energy.

The girls met with representatives from the “Save the Rain” program who explained the project’s attributes and the importance of creating green infrastructure in the city.

The project includes the installation of several green infrastructure elements that will capture stormwater and enhance the urban landscape. The project incorporates enhanced street tree plantings, the installation of porous pavers in parking lanes, the use of infiltration trenches and stormwater planters, and additional landscaping features throughout the footprint of the 300 block of E. Water Street.

The green infrastructure installed in this project will reduce stormwater runoff by 924,000 gallons per year.

Save the Rain Workshops

RAIN GARDEN WORKSHOP

Saturday, July 28 • 9 AM- 12 PM
Westcott Community Center • 826 Euclid Avenue

- Learn how to design, create and care for a rain garden.
- Get advice on the variety of plants that work well in rain gardens and how to combine them to provide visual interest throughout the growing season.

RAIN BARREL WORKSHOPS

Saturday, July 28
City Hall Commons

Friday, August 3 • 5:30 PM
601 Tully Street

- Learn how you can use a rain barrel to help "Save the Rain" and keep our water clean.
- Use what you catch for your flower garden or clean-up projects around your yard!
- Residents of the city of Syracuse are eligible to receive a free rain barrel.

For more information, contact Khris Dodson at kdodson@syracusecoe.org or call 443-8818.

The Post-Standard

syracuse.com

Sustainability: By the numbers; More sewer lines in Clay?

Published: Tuesday, July 31, 2012, 3:00 AM

By **The Post-Standard Editorial Board**

Since 1950, single-family residential parcels in Onondaga County have tripled in size while the average household has decreased by 30 percent.

In 2010, 81 percent of Onondaga County residents drove alone to work; 8.5 percent carpooled; 1.9 percent used public transportation; 5.5 percent walked or biked. Vehicle miles traveled grew 12 percent between 2000 and 2007.

Yearly carbon emissions for the Syracuse area are much higher than in most metro areas — 2.682 metric tons per capita, compared with 2.235 metric tons.

Onondaga County has 3,500 miles of roadway and 492 bridges.

There are 26,000 acres of state, county and local parks in the county, as well as 2,400 acres preserved by local land trusts.

There are 193,000 acres in county agricultural districts.

The county's "Save the Rain" program has launched more than 50 projects, distributed 600 rain barrels and aims to plant 8,500 trees in the city of Syracuse.

Source: Onondaga County Sustainable Development Plan (draft), on the web at future.ongov.net.

More sewer lines in Clay?

The Onondaga County Industrial Development Agency plans to ask the county Legislature for $5.8 million to build a sewer line to the Clay Business Park — at this point a 335-acre field off Caughdenoy Road — so that it can be "shovel ready" for industrial clients.

Does the county's new sustainable development plan, which would put the brakes on expanding sewer lines, conflict with the Clay Business Park proposal?

No, says County Executive Joanie Mahoney. The park is wholly within the existing county sewer district, so it's not a question of expansion. "What we're concerned about is development migrating beyond the district," she said. "This park can generate a lot of jobs without expanding the residential circle in the future."

Mahoney said she would "absolutely" prefer such industrial development in an urban environment such as Syracuse. She said she would be "thrilled" if the Legislature reduced the size of the sewer district, commensurate with the added sewer lines for the Clay Business Park.

But her bottom line is that no, the project does not inherently conflict with the sustainability plan.

- Contract with Gemmi Boy, LLC for reimbursement of green improvements in the Clinton sewershed.

  Contract Amount: $47,537 Executed: 7/12/12

Green Improvement Fund (GIF)

- Contract with Onondaga Commons, LLC (Lean-On-Me Daycare) for reimbursement of green improvements in the Clinton sewershed.

  Contract Amount $199,500 Executed: 7/12/12

Green Improvement Fund (GIF)

- Contract with Onondaga Commons, LLC (County Health Clinic) for reimbursement of green improvements in the Clinton sewershed.

  Contract Amount $77,800 Executed: 7/12/12

Green Improvement Fund (GIF)

- Contract with Onondaga Commons, LLC (Rural Metro) for reimbursement of green improvements in the Clinton sewershed.

  Contract Amount $198,949 Executed: 7/12/12

Green Improvement Fund (GIF)

- Contract with Near West Side Initiative, Inc. for reimbursement of green improvements in the Clinton sewershed.

  Contract Amount: $34,500 Executed: 7/24/12

Green Infrastructure Program – City Lot 4/N. State/Green Street

- Contract with Paul Vitale, Inc. for installation of stormwater collection system in the City of Syracuse.

  Contract Amount: $587,000 Executed: 7/12/12

Urban Forestry Grant

- Contract with Synapse Sustainability Trust for tree planting on brownfield sites in the City of Syracuse.

  Contract Amount: $44,575 Executed: 7/12/12

Amendments to Existing Contracts

Green Infrastructure Program – Parking Lot Maintenance

- Contract with Onondaga Environmental Institure amended for continuing maintenance in City-owned parking lots for 2012.

  Contract Amendment Amount: $19,400 Executed: 7/12/12

Change Orders

Midland Ave. CSO 044

- Contract with Joseph J. Lane Construction Corp. for miscellaneous work including additional dewatering.

  Contract Change Order Amount: $1,000,000 Executed: 7/12/12

Green Infrastructure Program – Downtown Streetscapes/Water Street

- Contract with Davis Wallbridge amended to include additional milling, paving, and road base repairs.

  Contract Change Order Amount: $34,685.66 Executed: 7/24/12

Funding

Grants

State Bond Act Funds

- Reimbursements requested in July:
  Clinton for $1,203,428.04 on 7/27/12

- Reimbursements received in July:
  Clinton for $1,371,869.96 on 7/3/12
  Clinton for $3,743,879.45 on 7/16/12
  Clinton for $2,987,648.68 on 7/23/12

Total payments received to date in State Bond Act funds: $42,543,559.

Federal EPA Funds

- Reimbursements requested in July: None

- Reimbursements received in July:
  Midland for $223,586.35 on 7/16/12
  Harbor Brook for $1,553,581.06 on 7/16/12

Federal Army Corps of Engineers Funds

- Reimbursements received in July:
  CSO 022/045 for $552,773.16 on 7/27/12

- Reimbursements requested in July:
  CSO-022/045 for $552,773.16 on 7/2/12

EFC Loans

- Reimbursements received in July:
  Midland LT for $6,954,197.10 on 7/13/12

- Reimbursements requested in July:
  Midland LT for $6,954,197.10 on 7/13/12

- Long Term EFC loan requested in July:
  Midland LT loan for $11,395,177.

Total reimbursement monies received to date through EFC loans for the funded ACJ projects: $188,403,461 (short term) and $53,278,098 (long term).

Chronology
of
Project Construction Starts

	Status	Location
Pre-ACJ Signing (1/20/98)		
• General Improvements	Complete	Metro
• Odor Control and Residuals Handling	Complete	Metro
1998		
• Digital Systems Upgrade	Complete	Metro
• Ammonia Removal Demonstration	Complete	Metro
• Aeration System Upgrade	Complete	Metro
• Hiawatha RTF - ACOE	Complete	Regional Market
• Newell St. RTF Demo/Improvements	Complete	W.Newell/Vale St.
• Maltbie St. FCF	Complete	Maltbie/Plum St.
• Siphon Rehab	Complete	Various
1999		
• Digester Modifications/Chemical Storage	Complete	Metro
• Franklin St. FCF	Complete	I-690/Franklin
• West Street Sewer Separation	Complete	W. Genesee, Plum, Tracy, N. West St.
• Ammonia Trackdown	Complete	Metro
2000		
• Midland Ave. Conveyance Phase I	Complete	Tallman/Oxford St.
• Phosphorus Removal – Phase I Pilot	Complete	Metro
2001		
• Erie Blvd. Storage System Upgrade	Complete	Franklin to Teall
• Full Scale Ammonia Removal/ Stage II Phosphorus Removal	Complete	Metro
• Kirkpatrick St. Pump Station & Force Main	Complete	Kirkpatrick St.
• Onondaga Creek FCF	Complete	Inner Harbor
• Teall Brook FCF	Complete	Teall Ave.
• Water Street Sewer Separation (CSO 024)	Complete	Water Street
2002		
• Harbor Brook FCF	Complete	W.Hiaw./I-690
• Brighton Ave Sewer Separation (CSO 053/054)	Complete	Brighton/Bishop Ave

Project	Status	Location
2004		
• Tallman/Onondaga Sewer Separation (CSO 038, 040, 046A &046B)	Complete	Tallman/Onondaga
• Midland Phase II RTF/Conveyances	Complete	Blaine/Oxford St.
2005		
• Phosphorus Removal – Phase II Pilot	Complete	Metro
• Biosolids Handling Improvements	Complete	Metro
2006		
• Sewer Separation – CSO 047 & 048	Complete	South Ave/ Bissell St.
2007		
• Sewer Separation – CSO 050	Complete	Parkway/Rockland
• Clinton Phase I Conveyances	Complete	
2008		
• Clinton Phase IIA Conveyances	Complete	
2009		
• Sewer Separation – CSO 051	Complete	Colvin St.
2010		
• Harbor Brook Interceptor Sewer	Authorized/Underway	Velasko/Fayette
2011		
• Midland CSO 044	Authorized/Underway	W. Castle/South Ave
• Clinton Storage Facility	Authorized/Underway	Armory Square
• Lower Harbor Brook (Conveyance & Storage)	Authorized/Underway	Hiawatha/State Fair Blvd.
• Save the Rain Green Projects	Authorized/Underway	Various
• CSO 022 Sewer Separation Project	Authorized/Underway	West Genesee/Franklin
• CSO 045 Sewer Separation Project	Authorized/Underway	South Avenue
2012		
• Save the Rain Green Projects	Authorized/Underway	Various

CONTRACTORS for
CONSTRUCTION PROJECTS
Metro Treatment Plant

AERATION SYSTEM UPGRADE	
Bongiovanni Construction (General)	$5,626,956.41
Ridley Electric (Electrical)	$ 846,154.00
DIGITAL SYSTEM UPGRADE	
Systems Integrated	$2,974,514.27
ODOR CONTROL CONTRACT # 1	
Falconet, Inc. (General)	$4,872,660.53
Scriba Electric (Electrical)	$ 315,580.30
Burns Bros. (Heating/Ventilation)	$ 82,459.00
Burns Bros. (Plumbing)	$ 50,168.00
ODOR CONTROL CONTRACT # 2	
Murnane Construction	$1,636,000.00
PHASE III IMPROVEMENTS CONTRACT 1 – DIGESTER & LAGOON IMPROVEMENTS	
Maxim Construction	$ 645,730.74
