

FACT SHEET

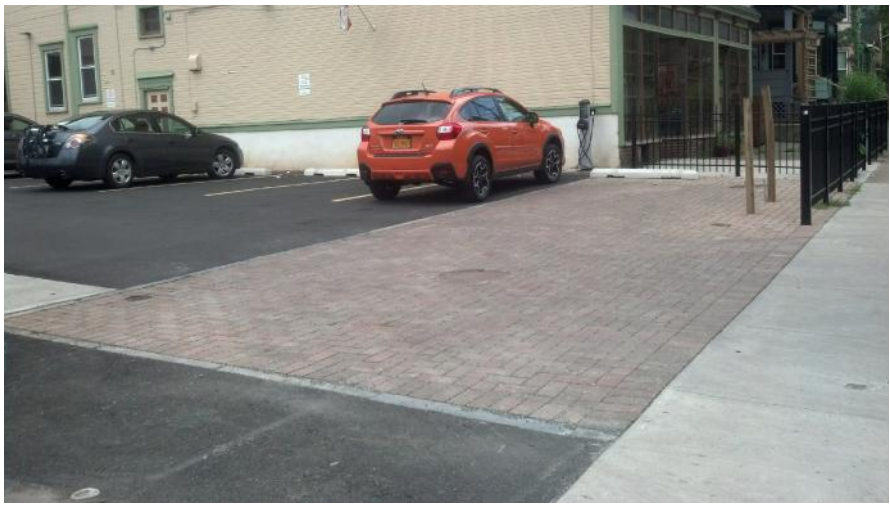

Green Improvement Fund: American Beech (Taste of India)

Project:	American Beech
Project Owner:	Private
Project Location:	124-126 Dell Street
Sewershed:	Clinton
GI Technology:	Porous Pavement, Porous Pavers, Drywell System
Capture Area:	7,811 sq. ft.
Run-off Reduction:	146,100 gal/yr
Year Completed:	2012
GIF Award:	\$53,050

Project Description: The American Beech project is located at 124-126 Dell Street. The project includes the redevelopment of an existing parking lot to accommodate customers dining at the Taste of India restaurant.

The project also includes the addition of porous concrete in the parking area and two drywell parking systems. The porous pavement sections collect runoff from the adjacent building (through roof drains), while the porous paver system collects the remainder of the parking lot. Additionally, the project includes planter boxes, which improve aesthetics and also drain to the porous pavement area. This green infrastructure manages the runoff from a total capture area of approximately 7,811 square feet.

In total, the American Beech project will capture an estimated 146,100 gallons of stormwater annually.
