Connective Corridor: Phase 1, Contract 2

Project Description: The Connective Corridor: Phase 1, Contract 2 project is the third and final Save the Rain project of 2011, done in partnership with the City of Syracuse and Syracuse University. The City and University are constructing a corridor between University Hill and Downtown Syracuse and the Save the Rain program has partnered with both to include green infrastructure throughout the corridor. When combined, the 2011 Connective Corridor Projects will prevent a total of 5.9 million gallons of stormwater from entering the combined sewer system each year.

The East Genesee portion of the Connective Corridor work (Phase 1, Contract 2) consists of creating a green street on both sides of East Genesee. This includes various types of green infrastructure, including subsurface infiltration trenches, porous pavement, tree plantings and bioretention. The result of this work is that 1,771,000 gallons of stormwater is captured annually and kept out of the combined sewer system.

E Genesee St Before Construction

Project:	C.C. Phase 1, Contract 2
Project Owner:	City of Syracuse
Project Location:	E Genesee St. Between University and Forman Ave.
Sewershed:	Clinton
GI Technology:	Green Street
Capture Area:	142,000 sq. ft.
Run-off Reduction:	1,771,000 gal/yr
Year Contracted:	2011
Construction Cost:	TBD
Prime Contractor:	Barrett Paving Materials
